

SUBSTRATE:

The products of the Elements ECO are available as standard with a self-adhesive finish and can be processed on all substrates without expansion joints. The substrate must be dry, smooth, free of loose parts, dust, dirt, grease, wax and silicone. Never mount Materials Inc panels on uneven surfaces, as this may result in a loss of visual quality. To achieve maximum adhesion, non-absorbent surfaces must always be cleaned with alcohol (ethanol, isopropyl alcohol).

MECHANICAL PROCESSING:

must always be done from the decor surface. The products can be easily cut with a wallpaper knife on site.

BONDING:

Remove the adhesive cover step by step, avoiding contact with the adhesive surface and press as firmly as possible onto the subsurface. (Absolutely avoid the formation of bubbles / air pockets)

For large areas, it is best to use a medium-hard rubber hand roller with a width of approx. 170 mm.

The final adhesion is reached after 24 hours at room temperature.

TIP:

Optionally, the Elements ECO products can be offered non-adhesive (NA) or magnetic, depending on the application requirements.

In addition, we can equip the Elements ECO panels with a specially developed adhesive to mount the decorative sheets directly onto the ceiling.

Please contact us if you are interested in any of these applications.
